

International Council for the Exploration of the Sea (ICES) – Science for sustainable seas

The world's oceans play a crucial role in the functioning of the global environment. Marine ecosystems are driven by physical, chemical, and biological processes that influence the development of biological communities and exploitable resources. Understanding these prio4(es)25w11(c)5(d)513 [

The newly established Working Group on Aquaculture (WGAQUA) will develop science and advice
