

Modest global economic recovery expected, but return to robust and sustained growth remains elusive: UN report

Concerted policy efforts to revive investment and growth are needed to facilitate progress towards the Sustainable Development Goals

New York, 17 January – Although a modest global recovery is projected for

education and infrastructure, can serve to promote social and environmental progress, while also supporting productivity growth*

Environmental sustainability

The report highlights some positive developments related to environmental sustainability* The level of global carbon emissions has stalled for two consecutive years* This reflects the declining energy intensity of economies* The median
