

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in the management of the organization's resources.

2. The second part of the document outlines the specific procedures and protocols that must be followed to ensure the integrity and security of the data. This includes the implementation of strict access controls and regular audits to detect any potential breaches or unauthorized access.

3. The third part of the document provides a detailed overview of the various systems and tools that are used to support the organization's operations. It describes the capabilities of each system and how they are integrated to provide a seamless and efficient workflow for the users.

4. The fourth part of the document discusses the ongoing training and development programs that are designed to keep the staff up-to-date with the latest technologies and best practices in the field. It highlights the importance of continuous learning and the role of the organization in supporting the professional growth of its employees.

5. The fifth part of the document concludes with a summary of the key findings and recommendations. It reiterates the need for a strong and robust information security framework and provides a clear roadmap for the future, including the implementation of new initiatives and the continuous improvement of existing processes.

6. The sixth part of the document provides a detailed overview of the various systems and tools that are used to support the organization's operations. It describes the capabilities of each system and how they are integrated to provide a seamless and efficient workflow for the users.

7. The seventh part of the document discusses the ongoing training and development programs that are designed to keep the staff up-to-date with the latest technologies and best practices in the field. It highlights the importance of continuous learning and the role of the organization in supporting the professional growth of its employees.

8. The eighth part of the document concludes with a summary of the key findings and recommendations. It reiterates the need for a strong and robust information security framework and provides a clear roadmap for the future, including the implementation of new initiatives and the continuous improvement of existing processes.

In our Development Plan, we acknowledge the need to strengthen our data systems, and enable the registration and identification of all, in particular those who have not been reached, so far, and who belong to the most vulnerable groups, taking into account principles of confidentiality and privacy.

Key issues identified in the PoA — such as gender inequality, youth unemployment, displacement of migrants and violations of sexual and reproductive health and rights — cannot be fully understood without the collection and analysis of data that will enable identification of population groups that are most impacted by these issues.

We realize that collection of quantitative data through national census, civil registration and other quantitative data systems is not sufficient. Putting people at the center of development, is not only about counting, but also to know about their needs, perceptions and real life experiences. Obtained information should also provide detailed insights in persistent barriers for the development of effective interventions that are adjusted to specific needs and circumstances.

Important gains have been achieved in strengthening the national data collection systems, with the digitalization of databases and the strengthening of surveillance

systems in key ministries. These improvements have resulted in increased and expanded availability of reliable national data on health and the educational status of our population, disaggregated by sex, age, geographical area and other relevant variables.

Offices for civil registration have been expanded, to ensure collection of civil registry and vital statistics nationwide, including in remote areas. Although Suriname already

census and other statistical data has been enhanced through websites of the government, non-government institutions and online platforms.

Various studies are conducted on the situation of vulnerable groups, including children and adolescents, women in all their diversity, indigenous populations, migrants, people living with HIV and the elderly. In line with the National Policy on Sexual and Reproductive Health and Rights, several community studies have been conducted to construct baseline databases and enable the monitoring of various SRHR issues.

To support and strengthen the process of decentralization, the Human Development

Index was developed, which measures the human development and the gender equality

index on both the national and the District level. Since 2002, we published 7 editions of

and raise awareness on the use of data for the effective development and implementation of policies and programs.

In closing, we reaffirm our commitment to both the PoA of ICPD and the 2030 Agenda, and the common recognition that development should be human rights based and therefore inclusive of all.

Thank you.
