

The GEF-5 SFM/REDD-plus Program

Addressing Forests' Global Warming and Ecosystem Financing in

www.theGEF.org

About GEF-5 (2010-2014)

\$4.3 billion replenishment

GEF projects are fully country-driven (STAR)

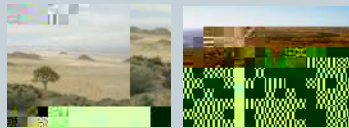

Separate funding envelope for SFM/REDD-plus

Focal Areas at the GEF

Natural Resources

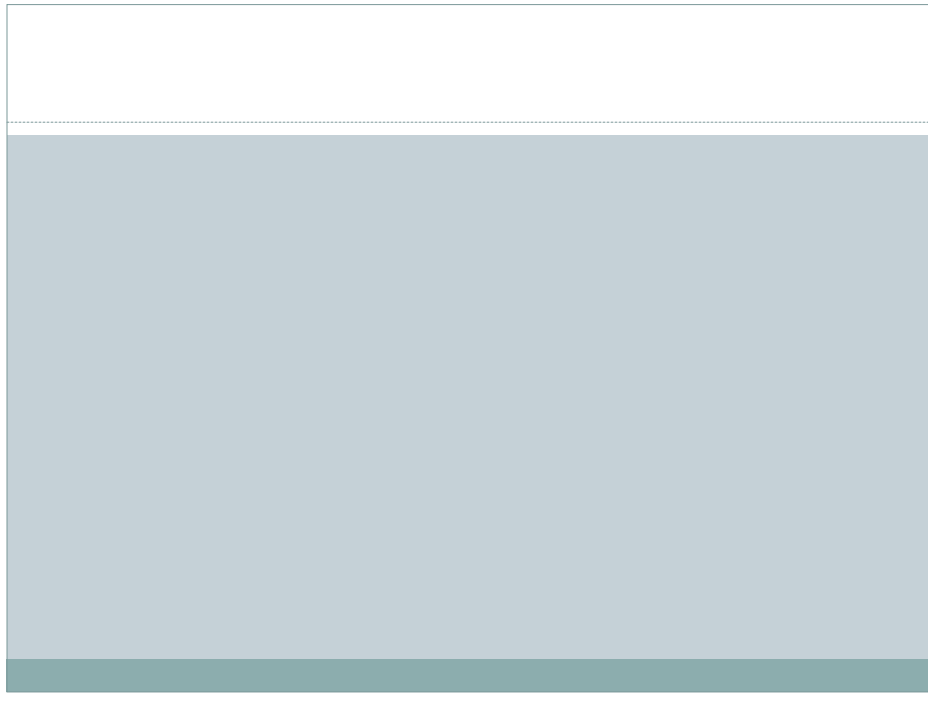

Biodiversity
Land Degradation
International Waters

Climate Change & Chemicals

Climate Change Mitigation
Persistent Organic
Pollutants / Chemicals

The GEF-4 SFM Program

- In June 2007, the GEF-4 SFM Program was created
- The SFM Program did not have a separate funding envelope but drew on resources from three focal areas
- The Tropical Forest Account as a \$40 million GEF pilot in REDD-plus
- **112 projects; GEF funding: \$450 million; other sources: 1.3 billion**

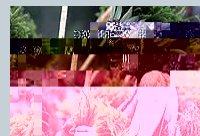

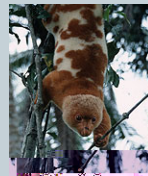

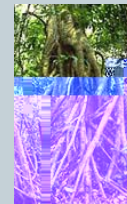

Multiple Global Environment Benefits: Triple Importance of Forests

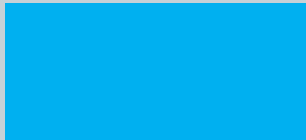

CLIMATE CHANGE: Slowing tropical deforestation is bound to play a much larger role in mitigating climate change.

BIODIVERSITY: Forests harbor over 60% of all terrestrial plant and animal species.

LAND DEGRADATION: Forests provide livelihoods and vital environmental services to hundreds of millions of people.

Financing SFM/REDD-plus in GEF-5

Thank you!

Dirk Gaul, Ph.D.
Forestry Specialist, Natural Resources, GEF Secretariat
