Agri-Food Systems

A food system encompasses the entire range of actors and their interlinked value adding activities involved in the production, aggregation, processing, distribution, consumption and disposal of food products that originate from agriculture, forestry or fisheries, and parts of the broader economic, societal and natural environment in which they are embedded.

As such an agri-food systems approach needs to [illegible] the wide range of public and private actors, as well as their interdependent activities and is responsible for driving the success or failure of agri-food systems.

Sustainable – Inclusive - Resilient
