C. EFFECTS OF COVID-19 ON FOOD SECURITY, NUTRITION, AND AGRICULTURE IN THE LDCs

An analysis of the food and agriculture sector in the LDCs shows the interconnectedness of health, poverty, and ecodec Y"Z[I[befc[dj\$J^["Z[ce]hWf^Y"fhe bj"WdZ"ijhkYjkhWb" features of the economy of the LDCs make agriculture a sector mj^~[njhWehZ_dWho~]hemj^~fej[dj_W\$\$?dYh[W_d]~fheZkYj_l_jo~_d~ Wjhykbkhj<u>~i</u>~Yhky_Wb\ehrfel[hjo~hjZkYj_ed~WdZ~e\j[d~X[d[ji~ the poorest and most vulnerable (Christiaensen et al., 2018). Agricultural growth can also positively impact other areas of human development, such as health and nutrition. Rising agricultural productivity can also reduce poverty by freeing up labor for non-farm agricultural activities or non-agricultural activities. In many LDCs, where food is primarily locally produced and consumed, increasing productivity growth in agriculture can facilitate the transfer of labor to non-farm activities without necessarily increasing food insecurity to poor or vulnerable populations.

The severe lockdown measures imposed by high income countries to contain the pandemic illustrates the importance of strong social safety nets that provide protection against i [I [h[7 _ihkf]_edi 7 Wki [7 Xo] 6 [i [7 [Wkh[i 7 Mb] 6] njh[c Who]
