

## MDG success springboard for new sustainable development agenda: UN report

Many achievements made in MDGs in Western Asia are threatened by conflicts

NEW YORK, 6 JULY 2015—The Millennium Development Goals (MDGs) have produced the most successful anti-poverty movement in history and will serve as the jumping-off point for the new sustainable development agenda to be adopted this year, according to the annual MDG report launched today by United Nations Secretary-General Ban Ki-moon.

The MDG report 2015 found that the 15-year effort to achieve the eight aspirational goals set out in the Millennium Declaration in 2000 was largely successful across the globe, while acknowledging shortfalls that remain. The data and analysis presented in the report show that with targeted interventions, sound strategies, adequate resources and political will, even the poorest can make progress.

“Following profound and consistent gains, we now know that extreme poverty can be eradicated within one more generation”, said Ban Ki-moon. “The MDGs have greatly contributed to this progress and have taught us how governments, business and civil society can work together to achieve transformational breakthroughs”.

### Goals and targets work

The MDG report confirms that goal-setting can lift millions of people out of poverty, empower women and girls, improve health and well-being, and provide vast new opportunities for better lives.

Only two short decades ago, nearly half of the developing world lived in extreme poverty. The number of people now living in extreme poverty has declined by more than half, falling from 1.9 billion in 1990 to 836 million in 2015.

The world has also witnessed dramatic improvement in gender equality in schooling since the MDGs, and gender parity in primary school has been achieved in the majority of countries.

More girls are now in school, and women have gained ground in parliamentary representation over the past 20 years in nearly 90 per cent of the 174 countries with data. The average proportion of women in parliament has nearly doubled during the same period. The rate of children dying before their fifth birthday has declined by more than half, dropping from 90 to 43 deaths per 1,000 live births since 1990. The maternal mortality ratio shows a decline of 45 per cent worldwide, with most of the reduction occurring since 2000.

Targeted investments in fighting diseases, such as HIV/AIDS and malaria, have brought unprecedented results. Over 6.2 million malaria deaths were averted between 2000 and 2015, while tuberculosis prevention, diagnosis and treatment interventions saved an estimated 37 million lives between 2000 and 2013.

Worldwide, 2.1 billion have gained access to improved sanitation and the proportion of people practicing open defecation
