STATEMENT

BY

H.E. Mr. Daniel António
Permanent Representative of Mozambique
to the United Nations

On Behalf

OF THE AFRICAN GROUP

At the

General Debate

OF THE

55TH SESSION OF THE COMMISSION ON THE
STATUS OF WOMEN

NEW YORK, FEBRUARY 24, 2011

Mr. Chairman:

I have the honor to deliver this statement on behalf of the African Group.

The African Group aligns itself fully with the statement made by the delegation of Argentina on behalf of the Group of 73 and China.

At the outset allow me to extend our warm congratulations to Mr. ... Chairman, and to all other members of the Bureau on your unanimous election to preside over this session and to do the full measure of the African Group in the accomplishment of your noble task of steering the proceedings of the 57th session of the Commission for the elimination.

We commend the Secretary General for his report contained in document E/CN.6/2011/3, which provides a comprehensive examine of the critical issue of women's challenge to access and participation in science and technology, including in the promotion of women's entrepreneurship, to employment and decent work.

While noting that encouraging progress is crucial in advancing women's participation even in science and technology, and even women's entry in some sub-field of science, particularly like "science, we are still concerned with the fact that they continue to be underrepresented in other important fields of economic development such as computing, engineering, manufacturing and construction.

Mr. Chairman,

Recognizing the essential role women play in African agriculture economies, specially in agriculture where they count for more than half of its food crop production, as well as in household responsibility and community management, the African Group affirms that it is a social imperative and a girl's access to science and technology, knowledge and skills is an economic imperative.

Indeed, to address food security which has affected more 44 million people lastly and to feed 9 billion people in 2050, we need the active participation of women.

Dealing at the pressing nature of the development challenges facing Africa in particular, we fully agree with the Secretary General which he argues that policymakers have a key role to play in integrating a gender perspective in science, technology and innovation policies.

But the adoption of good policies through mainstreaming cannot in itself bring the necessary changes in society. Policy can set its own agenda on the role of women, as the equals to men, to participate more actively in poverty eradication and sustainable development efforts.

Instead, building women's scientific and technical capacity in Africa can only help them achieve a better and more just outcome. It will contribute fully to economic growth if economic and social infrastructure and institutions are adequately equipped, educated, trained, and transfer of technology and political assistance.

Mr. Chairman,

In the past decades much progress has been made in Africa in expanding access to basic education for girls.

Nevertheless, a lot is still to be done in order to make science and technology attractive to women. Women's scientific and technical capacity is also a challenge in Africa, while the severe impact of the multiple economic and financial crisis, as well as the donor fatigue, has impeded further the African efforts to development and poverty eradication.

It is worthy to note that, the Constitutive Act of the African Union; the Protocol on the Africa Charter on Human and Peoples' Rights on the rights of women in Africa, 2003 and the Solemn Declaration on Gender Equality in Africa provide a fundamental "framework" policy for their commitments on gender equality and women's empowerment.

Indeed, since the 5th Session of the Commission on the Status of Women in Africa, African countries have continued to provide leadership in championing Gender Equality and Women's Empowerment through its joint and individual commitments.

In this regard, important regional frameworks have been established in Africa to meaningfully address the challenge of the access to and participation of women in science and technology.

The First African Union Conference of African Women in Science and Technology, held in Libreville in August 2007, expressed clearly that women are a resource that could be used towards social and economic development of the continent, through participating in science and technology programs. The meeting aimed mainly at addressing gender representation of African women in science, mathematics and engineering fields, and also considered and endorsed a proposal to establish a continental association of the experts of the African Union.

Furthermore, the Second Decade of Education for Africa (2010-2019), calls for a greater participation of women in science and technology at all levels including higher education.

By adopting the over All Gender Policy in 2009, I wish further to declare an African Women's Decade 2010-2020, and the launching of the fund for African Women, the African countries showed unpreceded commitment and dedication in the promotion of gender equality and women's empowerment.

Moreover, while the African Union is proud to adopt a continental Gender Policy, it is fully sensitized of the challenges implementation, challenges due to weak institutions and technical capacities at national, continental and international levels.

Therefore, we strongly believe that the role of the Union in this regard is legislation; investing in girls' education; women training in vocational skills; providing women access to science and technology; which enable women to significantly contribute to the efforts towards poverty reduction and achievement of sustainable development of the African Continent.

A renewed international commitment to the transfer of science, technology and technical assistance to developing countries, in particular to the African

continent is of crucial importance to achieving effective and sustainable development of policies and strategies on gender equality and empowerment of women.

Indeed, there are challenges that call for joint efforts by all, not just one country alone. The struggle for women's empowerment, sustainable development, international peace and security requires full cooperation just from governments, international organizations, civil society and other stakeholders, including civil society organizations and the private sector...

This is why the priority theme of the 58th Session of the Commission on the status of women is "Access and participation of women in science and technology, including higher education, for the empowerment of women." Equal access to full employment in the labour market is also important in this context for equality, development and peace for the twenty-first century.

Mr. Chairman ...

In conclusion, the "African Group" has noted that the recommendations contained in the Secretary General's report are reiterated its readiness to fully collaborate with the Commission on the status of women towards the achievement of consensus, realistic and action-oriented outcomes as the main outcome of the deliberations of the current cycle of the Commission.

I thank you for your attention!
